
StudyFlix Progress Notes

Assignment Module V1 Completed

Core Assignment Features

-  Assignment list loading
-  Assignment details loading
-  Question display
-  Answer input
-  Assignment submission
-  Auto-submission when timer reaches zero

Timer System

Implemented:

-  Countdown timer
-  Timer persistence using DataStore
-  Timer recovery after app restart
-  Timer recovery after process death
-  5-minute warning state
-  Automatic timer cleanup after submission

Files:

AssignmentQuestionScreen.kt
AssignmentTimerDataStore.kt

Answer Persistence

Implemented:

-  Save answers while typing
-  Restore saved answers on reopen
-  DataStore-based local storage
-  Clear saved answers after submission

Functions added:

saveAnswer()
getAnswer()
clearAnswer()

Assignment Protection

Implemented:

- ☒ BackHandler interception
 - ☒ Leave Assignment warning dialog
 - ☒ Timer continues after leaving screen
 - ☒ Submission protection
-

Mathematics Toolbar

Implemented:

+
-
×
÷
=
π
θ
√
³√
∞
≠
≤
≥
±
%
²
³
^
-
(
)
[
]
sin(
cos(
tan(

log(
ln(
∫
∂

Features:

- ☒ Horizontal scrolling toolbar
- ☒ Quick symbol insertion
- ☒ Exam-friendly input

Question Images

Implemented:

- ☒ Added imageUrl to AssignmentQuestion model
- ☒ Question image display via Coil
- ☒ Fullscreen image dialog
- ☒ Tap image to enlarge

Model updated:

```
data class AssignmentQuestion(  
    val number: Int,  
    val text: String,  
    val marks: Int = 0,  
    val imageUrl: String = ""  
)
```

Next Priority After Lunch

Due Date + Timer Synchronization

Current Android behaviour:

Duration = 60 min
Due = 10:00

Student opens 09:50

Timer ends 10:50 ✕

Desired behaviour:

Duration = 60 min

Due = 10:00

Student opens 09:50

Timer ends 10:00 ☒

Implementation plan:

1. Read assignment dueDate
 2. Calculate due timestamp
 3. Compare due time with duration end time
 4. Use whichever comes first
 5. Persist final end time
-

Current Assignment Module Status

Assignment Module: ~95% Complete
